

API Gateway

Technical Design Overview

This document describes the routing, authentication, and rate-limiting behavior of the internal API gateway sitting in front of all customer-facing services. It is intended for engineers integrating a new service behind the gateway, not for external API consumers.

CONFIGURATION

PARAMETER	VALUE
Protocol	HTTPS/2 only
Auth method	Signed JWT, 15 min TTL
Default rate limit	100 req/s per client
Timeout (upstream)	8s
Retry policy	2 retries, exponential backoff

ENDPOINTS

GET /v2/health
POST /v2/auth/token
GET /v2/services/{id}
POST /v2/services/{id}/invoke
